## PROJECTS

---

### Human Exercise Detection And Correction

TechStack : Python, MediaPipe, OpenCV, Openpose, Tkinter and CNN

Developed a real-time body tracking system using skeleton-based representations and MediaPipe framework to improve exercise safety and effectiveness. Implemented posture estimation techniques to assess exercise execution accuracy by analyzing joint angles. Aimed at preventing injuries and enhancing workout quality through innovative technology solutions.

### Bank Management System

TechStack : Java AWT, Java Swing, MySQL

Built an Desktop Application with a simulation of ATM machine. Where user can create account, deposit money, withdraw money, check balance, account statement, Pin Change and all other functionalities.

### Event Attendance Management

TechStack : Flutter, Dart, MySQL

Built an application with Flutter and MySQL, enabling real-time attendee tracking, secure QR code check-ins, and robust data management. Seamlessly integrate with a backend API for smooth, efficient event coordination and a user-friendly experience..
